

TURBO PRODUCT CODE IMPLEMENTATION AND DECODING TERMINATION METHOD AND APPARATUS

ABSTRACT OF THE DISCLOSURE

5 A method of decoding a turbo product code (TPC) code word comprises
iteratively decoding the TPC code word using an iterative decoder. The method
further comprises terminating the iterative decoding when the TPC code word
satisfies a cyclic redundancy check (CRC). The TPC code word can include a
plurality of square code blocks of user data, with CRC data bits appended to one
10 of the plurality of code blocks instead of replacing user data within the code
blocks. Apparatus for implementing the method are also provided.
